

Maipu 3G Access Solution for Financial Industry

Flexibility

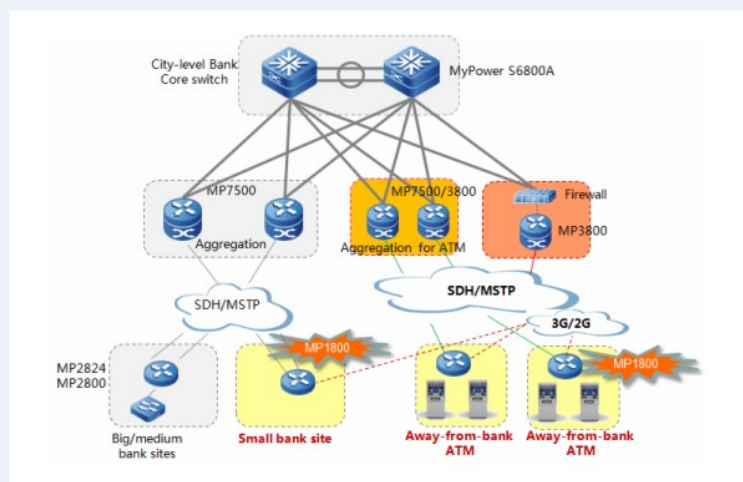

Reliability

Security

Easy Management

Along with the boom of bank services, more and more ATM machines and branch offices have been deployed in wide range of communities and rural areas to provide convenient services for their customers. Meanwhile, banks will consider some key aspects when providing such services, including how to get flexible link for the ATM machines and branch offices, how to guarantee the security of financial services, reliability and easy management for the tremendous sites. Maipu 3G access solution meets the requirements of financial industry.

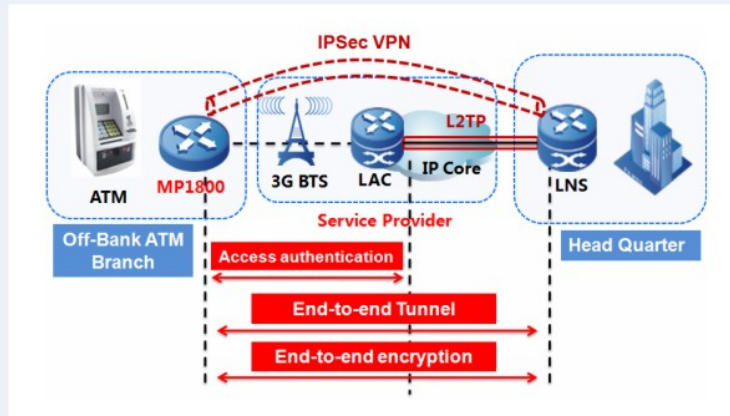

Flexible deployment of ATMs and bank branches:

Reliability with dual 3G uplinks:

End-to-end security for data:

- ◆ Multi-identity authentication based on user name, password and IMSI
- ◆ End-to-end tunnel via the IPSEC/GRE/L2TP technology
- ◆ DES/AES128/AES256 encryption algorithm guarantees the security of the financial service data

Easy management with E3G platform:

- ◆ Map instead of traditional topology gives you direct observation
- ◆ Opening new business with zero configuration on device
- ◆ Manage devices by SMS
- ◆ Update devices by remote E3G platform
- ◆ Real-time monitoring and warning
- ◆ Direct management interface and abundant statistic reports
